

AT4 wireless launches Continua Health Alliance Certification Test Tool

Malaga, Spain, January 28, 2010 — AT4 wireless today announced that the Continua Health Alliance automated Test Tool has been successfully launched. This Test Tool was developed by AT4 wireless during 2009, and has been approved as the official certification tool by Continua.

At the end of 2008 AT4 wireless was selected by Continua, an open industry group of technology, healthcare and fitness market leader companies, to develop a fully automated Test Tool to be used as part of the Continua Certification Program, and to provide certification testing services for Continua devices utilizing the automated Test Tool.

The Continua Test Tool will allow device manufacturers to assess their conformance to the Continua Design Guidelines and some of the standards and specifications they reference, reducing development efforts. Furthermore, it will reduce each unique device's time to market and is expected to contribute to a faster pace of Continua Certified devices present in the global consumer market.

At no cost, Continua has made this Test Tool available to its members, and Continua device manufacturers can utilize the Certification Test Tool as part of their quality assurance programs. In addition, the tool can be used to help ensure a successful test campaign prior to sending devices to AT4 wireless Laboratory, the official Continua Certification Test Lab.

"We are very proud to have successfully completed the development of this test system", said Andres Moreno, Marketing & Sales Director at AT4 wireless. "This is a significant milestone in the Health Industry and AT4 wireless is fully committed with the Continua Certification Program. AT4 wireless long experience in protocol test systems for multiple technologies has been very important to develop this tool"

"The availability of automated test tools from AT4 wireless will enable developers of Continua solutions to quickly and easily determine compliance to the Continua Version One Design Guidelines," stated Rick Crossen, president and chairman of the Board of Directors, Continua Health Alliance. "Interoperability is a key requirement for building a compelling ecosystem of devices that work together to help individuals better manage their health and wellness."

About AT4 wireless

AT4 wireless is a global supplier of Testing & Certification Services, Engineering and Test Systems.

From its Laboratories Division, AT4 wireless provides Testing and Certification Solutions for a wide range of industrial sectors (telecommunications, information technologies equipment, automation, health, electromedical equipment, electronics, aerospace, naval, photovoltaic and gaming technology, among others), with the aim to guarantee that products comply with the quality and safety requirements requested by the global market and users.

AT4 wireless is recognized as the most complete Wireless Certification & Testing Laboratory in the world and a leading manufacturer of cutting-edge test & measurement equipment for telecommunication technologies, having the largest coverage in different technologies (GSM/GPRS/EDGE, WCDMA, HSPA, LTE, WiMAX™, Bluetooth®, Wi-Fi®, RFID and NFC) and a portfolio that ranges from conformance, regulatory and interoperability testing to worldwide compliance services.

AT4 wireless was founded in 1991, has more than 340 employees and operates from its headquarter in Malaga (Spain), and branches in Herndon, Virginia (USA) and in Taipei (Taiwan).
